### Learn to Earn

## A Beginner's Guide to the Basics of Investing and Business

John Wiley & Sons LEARN TO EARN "Public companies are everywhere, and they surround you from morning to night. . . . Nearly everything you eat, wear, read, listen to, ride in, lie on, or gargle with is made by one. Perfume to penknives, hot tubs to hot dogs, nuts to nail polish are made by businesses that you can own." —from the Introduction. McDonald's, The Gap, Circuit City, Gillette, CBS, and thousands more . . . anybody can own part of big and small companies. As companies grow and prosper, you can too. Whenever burgers are eaten, sweaters are purchased, batteries are used, and faces are shaved, you've got a piece of the action. From Alexander Hamilton to Warren Buffett, people have been making big money by investing in the corporations and institutions around them. Mutual-fund superstar Peter Lynch and author John Rothchild explain what's not normally taught in high school —how the stock market helps you and how it helps the country. By understanding how and why the stock market works when you buy a share of a company or purchase a mutual fund, you can make informed —and profitable —decisions. Whether you're saving for college, a house, a trip, or retirement, there is no better method to secure a sound financial future than to invest. Young or old, there is no better time to start investing than now. "Investing is fun. It's interesting. It can put you on the road to prosperity for the rest of your life. . . ." Learn to Earn gives you the expert guidance you need to make the right start. Lynch and Rothchild cover the gamut on investment fundamentals and principles, from choosing stocks, to picking a broker, to reading an annual report. Learn to Earn reveals how to decipher the stock pages and how to evaluate the pros and cons of the five basic investment vehicles —savings accounts, collectibles, houses or apartments, stocks, and bonds. Yet, there is much more to investing than just the principles, and there is much more to Learn to Earn than just the fundamentals. Opportunity comes in many forms, from many sources, with many histories. Brimming with stories and parables, Lynch and Rothchild also explain: Why the world as we know it would collapse without investors . . . How capitalism, from the time of the American Revolution on, has shaped the past, and how that affects us today . . . How Coke, Campbell's Soup, Ben & Jerry's, Microsoft, and other big companies got started, who gets rich from them, and how they got that way . . . How to know the real story behind the price of a stock

## Valuing forest ecosystem services: a training manual for planners and project developers

Food & Agriculture Org. The degradation of ecosystems, including forests, and the associated loss of biodiversity, particularly due to human-induced threats and climate change, has gained increased attention from scientists and policymakers. The Millennium Ecosystem Assessment presented a new conceptual framework that puts ecosystem services at the centre and links human well-being to the impacts on ecosystems of changes in natural resources. The Economics of Ecosystems and Biodiversity initiative drew further attention to the economic benefits of conserving ecosystems and biodiversity, supporting the idea that economic instruments – if appropriately applied, developed and interpreted – can inform policy- and decision-making processes. Only a few ecosystem services, however, have explicit market value and are traded in open markets: many – especially those categorized as having “passive-use” value – remain invisible and are rarely accounted for in traditional economic systems. The failure to appropriately consider the full economic value of ecosystem services in decision making enables the continued degradation and loss of ecosystems and biodiversity. Most ecosystem services are considered public goods and tend to be overexploited by society. Many methods have been applied to the economic valuation of ecosystem services. The use of these methods, as well as the interpretation of their results, requires familiarity with the ecological, political, normative and socio-economic context and the science of economics. Recognizing, demonstrating and capturing the value of ecosystem services can play an important role in setting policy directions for ecosystem management and conservation and thus in increasing the provision of ecosystem services and their contributions to human well-being. The aim of this manual is to enhance understanding of ecosystem services and their valuation. The specific target group comprises governmental officers in planning units and field-level officers and practitioners in key government departments in Bangladesh responsible for project development, including the Ministry of Environment and Forests and its agencies. Most of the examples and case studies presented herein, therefore, are tailored to the Bangladesh context, but the general concepts, approaches and methods can be applied to a broad spectrum of situations. This manual focuses on valuing forest-related ecosystem services, including those provided by trees outside forests. It is expected to improve valuation efforts and help ensure the better use of such values in policymaking and decision making. Among other things, the manual explores the basics of financial mathematics (e.g. the time value of money; discounting; cost-benefit analysis; and profitability and risk indicators); the main methods of economic valuation; examples of the valuation of selected ecosystem services; and inputs for considering values in decision making.
