Atlanta's Concealment of the Baby Gun Club Landfill

Page Publishing Inc A concealment of any kind by our government to keep secrets of their criminal activities must not be tolerated especially when the government, in this case the municipality of the City of Atlanta trespasses on private properties and illegally dumps for years their hazardous waste. If they will do this, how can we the public, trust them with our drinking water?? 100% transparency is required! I've inscribed these pages after a number of alarming experiences dating back to the mid-1960s through present day. Imagine, all three levels of government have been and are allowing the ongoing concealment of a deeply massive hazardous illegal dumpsite. This site created by a dominant municipality,

whose authoritative power extends throughout the entire Southeastern section of the USA. From 1960s through 2000, this city's illegal trespassed entirely upon private properties of low-income blacks who lived adjacent the notorious all-black Perry Homes Housing Project. This city disposed more than three hundred thousand cubic yards of hazardous waste there. To make matters worse, the city zealously concealed and deceived every effort to expose their illegal activities for more than two decades to present day. My efforts and litigations have been relentlessly thwarted for years, due to the city's predominant goal to obtain the last parcel of land they disposed waste thereon, which unfortunately I still own. The City of Atlanta's law department and Public Works department deceptive method of condemning only my four properties has left me no other choice but to write this book. Public safety and health concerns have yet to be considered by any government, concerning this illegal dumpsite, consistently releases contamination into the air and directly into state and national waterways. My eight years of investigations reveal extensive ongoing damage to the public and environment. The publication of these facts will give insight into the evidence that our government doesn't want revealed. Ultimately, there is no such law on the books that address a rogue government agency; therefore, we as citizens in the USA, are left helpless to concealment consequences of a never-ending contamination source affecting a minimum of three states and the Gulf of Mexico. This book inspired me to create the movement called Our Public Trust (OurPublicTrust.com). We must unite globally to speak up and DEMAND TRANSPARENCY WHEN IT COMES TO OUR PUBLIC HEALTH AND SAFETY! May God protect us!

Rapid Prototyping of Application Specific Signal Processors

Springer Science & Business Media *Rapid Prototyping of Application Specific Signal Processors* presents leading-edge research that focuses on design methodology, infrastructure support and scalable architectures developed by the 150 million dollar DARPA United States Department of

Defense RASSP Program. The contributions to this edited work include an introductory overview chapter that explains the origin, concepts and status of this effort. The RASSP Program is a multi-year DARPA/Tri-Service initiative intended to dramatically improve the process by which complex digital systems, particularly embedded signal processors, are designed, manufactured, upgraded and supported. This program was originally driven by military applications for signal processing. The requirements of military applications for real-time signal processing are typically more demanding than those of commercial applications, but the time gap between technology employed in advanced military prototypes and commercial products is narrowing rapidly. The research on methodologies, infrastructure and architectures presented in this book is applicable to commercial signal processing systems that are in design now, or will be developed before the end of the decade. **Rapid Prototyping of Application Specific Signal Processors** is a valuable reference for developers of embedded digital systems, particularly systems engineers for signal processing systems (such as digital TV, biomedical image processing systems and telecommunications) and for military contractors who are developing signal processing systems. This book will also be of interest to managers who are charged with responsibility for creating and maintaining environments and infrastructures for developing large embedded digital systems. The chief value for managers will be the defining of methods and processes that reduce development time and cost.

Standard Guideline for the Collection and Depiction of Existing Subsurface Utility Data

American Society of Civil Engineers (ASCE) Standard 38-02 presents a credible system for classifying the quality of utility location information that is placed in design plans. The Standard addresses issues such as: how utility information can be obtained, what technologies are available to obtain that information; how that information can be conveyed to the information users; who should be responsible for typical collection and depiction tasks; what factors determine which utility quality level attribute to assign to data; and what the relative costs and benefits of the various quality levels are. Used as a reference or as part of a specification, the Standard will assist engineers, project and utility owners, and constructors in developing strategies to reduce risk by improving the reliability of information on existing subsurface utilities in a defined manner.
